

THE BOILER.
The boiler is the most important part of a steam engine. It is the vessel in which the water is heated and the steam is generated. The boiler must be strong enough to withstand the pressure of the steam. It must also be able to resist corrosion and wear. The boiler is usually made of iron or steel. It is often covered with a layer of insulation to prevent heat loss. The boiler is connected to the engine by a series of pipes and valves. The boiler is also connected to a water supply and a steam supply. The boiler is a complex piece of machinery that requires careful maintenance and operation.

HOUSEHOLD RECIPES.
A good recipe for a simple and delicious dish is as follows: Take one pound of butter, one pound of sugar, and one pound of flour. Mix the butter and sugar together until they are well combined. Then add the flour and mix until the mixture is smooth. Bake in a greased pan for one hour. This is a simple and delicious cake that is easy to make and can be enjoyed by the whole family.

GRAND COMBINATION.
A grand combination of the best of both worlds is a dish that is both delicious and healthy. One such dish is a vegetable soup. It is made with a variety of vegetables, including carrots, celery, and onions. The soup is cooked in a large pot with a small amount of oil and salt. It is a simple and healthy dish that can be enjoyed by the whole family.

REMOVED.
The following notice is hereby given: The business of the late J. B. Piper, Jr. has been removed to the new premises at No. 100 Broad Street, Newark, N. J. All customers are requested to call at the new address.

AMERICA'S LOST INVENTION.
The following notice is hereby given: The invention of the late J. B. Piper, Jr. has been lost. The invention was a new and improved method of making paper. It was a simple and easy method that could be used by anyone. The invention was a great improvement on the old method and was a valuable contribution to the paper industry.
